

(Windows, Mac OS)

Paso 1: Click en el icono de FortiClient en el escritorio para abrir el software.

Paso 2: Navegar a "Remote Access" pestaña a mano derecha.

Paso 3: Click en "Config VPN" para adicionar una conexión VPN.

Paso 4: Digite los parámetros en cada campo como se muestra abajo y haga click en aplicar.

The screenshot shows the 'New VPN Connection' window. At the top, there are two tabs: 'SSL-VPN' and 'IPsec VPN'. Below the tabs, there are four main sections with input fields: 'Connection Name' (labeled A), 'Description' (labeled B), 'Remote Gateway' (labeled C), and 'Authentication Method' (labeled D). The 'Authentication Method' dropdown is set to 'Pre-shared key'. Below this, there is an 'Authentication (XAuth)' section with two radio buttons: 'Prompt on login' (selected) and 'Save login'. An 'Advanced Settings' section is collapsed. At the bottom, there are 'Apply' and 'Close' buttons.

Ⓐ Ingrese el nombre del túnel VPN

Ⓑ Ingrese una descripción (Opcional)

Ⓒ Gateway Remoto : **181.191.250.38**

Ⓓ Método de Autenticación : **Clave compartida (k1z4m0n0g4t4r1)**
